SUMMARY

Backend Engineer experienced in building scalable APIs, automation systems, and NLP/data-processing pipelines using Python, FastAPI, Docker, and cloud infrastructure. Built production backend workflows including large-scale call-analysis pipelines processing 285M+ records.

TECHNICAL SKILLS

Languages: Python, SQL

Backend & APIs: FastAPI, Flask, REST APIs, Webhooks, Authentication

DevOps & Cloud: Docker, Linux, Nginx, GitHub Actions (CI/CD), GCP, DigitalOcean

Databases: PostgreSQL, Elasticsearch

Data & AI: NLP, ETL Pipelines, Hugging Face, Transformers, LLM APIs, LangChain

Tools: Git, Postman, Systemd

EXPERIENCE

Python Backend Developer

11/2024 - 01/2025

Namdisoft

Gurugram

- Developed and launched CivicLink, a WhatsApp-based civic reporting platform using FastAPI, Docker, and WhatsApp Cloud APIs
- Integrated AI-based image processing and Elasticsearch to enable real-time issue reporting and analytics workflows
- Devised production-ready backend systems with API security, logging, and automation workflows, reducing the manual reporting effort by 60%

Backend & AI Engineer (Freelance Contract)

06/2024 - 11/2024

Hilton Grand Vacations

Remote

- Engineered and maintained production-grade backend systems and scalable APIs using Python, FastAPI, Flask, Docker, and Linux-based cloud infrastructure
- Innovated NLP and ETL pipelines processing 285M+ call records from AWS S3 for large-scale call analysis workflows
- Implemented tokenization and data-filtering pipelines reducing dataset size by 28% by removing low-signal and corrupted records
- Optimized ETL and annotation workflows, reducing manual service-desk effort by 40% and contributing to improved rejection rates from 50% to 30%

PROJECTS

Minecraft Server Infrastructure | *Python, Docker, Linux, DevOps*

- Architected and managed Dockerized game server infrastructure with 99%+ uptime over 2 years
- Optimized server performance and infrastructure reliability for 20+ concurrent players through monitoring, networking, and resource tuning
- Led a team of 12 contributors managing deployments, server configuration, and infrastructure improvements

QR-Based Ticketing System | *Python, FastAPI, Docker, Linux*

- Designed and implemented an automated QR-based ticketing and bulk email distribution system using FastAPI and Docker
- Engineered bulk email delivery workflows capable of sending 200+ emails per execution with automated ticket generation
- Managed self-hosted mail server and backend infrastructure with 0 downtime over 6 months of continuous operation

EDUCATION

Noida International University

B.Tech in Computer Science

Greater Noida

07/2022 - 05/2026
